

A LISTING OF CLAIMS

No amendments are made herein. This listing of claims, which is provided as a convenience to the Examiner, will replace all prior versions, and listings, of claims in the application:

1. (Previously presented) A method comprising:

receiving a separate information unit entered with input elements of a dynamic

I/O arrangement belonging to a user interface of an electronic device;

identifying after each input the entered information unit and determining based on

probability which information units will likely be input next; and

emphasizing by size the input elements corresponding to the information units

likely to be entered next in the user interface of the electronic device,

wherein the size of the emphasized input elements are determined on a

case-specific basis depending on the probability of the information unit

associated with the input element being entered next.
2. (Original) The method according to claim 1, whereby the input of the
information unit is fulfilled by a press of a separate key belonging to the user interface.
3. (Original) The method according to claim 1, where the dynamic I/O
arrangement comprises a touch display or a projection keyboard.
4. (Cancelled)

5. (Cancelled)

6. (Previously presented) An electronic device comprising:

a memory configured to save information;

a user interface configured to display a plurality of input elements, each of the
input elements corresponding to an information unit;

an input control configured to receive selections of information units selected
using the input elements displayed by the user interface;

a control unit coupled to the memory, user interface and input control, the control
unit configured to identify after each input an entered information unit; to
determine based on probability which information units will likely be
entered next; and to cause the user interface to emphasize by size the input
elements corresponding to the information units likely to be entered next,
wherein the size of the emphasized input elements are determined on a
case-specific basis depending on the probability of the information unit
associated with the input element being entered next.

7. (Previously presented) The electronic device according to claim 6, where
the input elements are defined by an area on a touch display or a projection keyboard.

8. (Cancelled)

9. (Cancelled)

10. (Previously presented) The electronic device according to claim 6, which is a cellular terminal or PDA.

11. (Previously presented) A computer program product comprising a computer readable memory storing a computer program executable by a control apparatus of an electronic device, the computer program configured to perform operations for controlling the electronic device when executed, the operations comprising:

receiving information units entered with input elements of a dynamic I/O

arrangement belonging to a user interface of an electronic device;

identifying after each input the entered information unit and determining

based on probability which information units will likely be input next; and

emphasizing by size the input elements corresponding to the information

units likely to be entered next in the user interface of the electronic

device, wherein the size of the emphasized input elements are

determined on a case-specific basis depending on the probability of

the information unit associated with the input element being

entered next.

12. (Previously presented) The computer program product according to claim 11, where said input of the information unit in the electronic device is fulfilled by a separate key press in a user interface.

13. (Cancelled)

14. (Cancelled)
